▪ RESUME SUR L'EQUIPE

L'UMQVC fait partie du pôle cancérologie du CHU de Besançon, et est rattachée à l'équipe Inserm UMR 1098.

Les missions de l'UMQVC sont d'apporter une expertise méthodologique pour le design (protocole, CRF), le data management, l'analyse et l'interprétation des essais cliniques et des études épidémiologiques en cancérologie. L'UMQVC est composée de trois modules : Epidémiologie et biostatistiques en cancérologie / Recherche méthodologique et analyse en qualité de vie / Qualité de vie en routine.

Dans le domaine de la qualité de vie, une thématique importante de recherche de l'UMQVC porte sur la méthodologie d'analyse longitudinale des données de qualité de vie dans les essais cliniques en cancérologie. Ainsi, des projets d'envergure nationale (MCID-RS, MD-QoL) et internationales (Q-Recist) ont été initiés. Ces projets portent sur les challenges méthodologiques de l'analyse longitudinale tels que :

- l'occurrence des données manquantes potentiellement informatives,
- la définition de la différence minimale cliniquement importante pour l'interprétation des résultats d'analyse,
- ainsi que sur l'occurrence de l'effet Response Shift caractérisant le processus d'adaptation des patients vis-à-vis de la maladie et du traitement.

L'unité mène également plusieurs projets de recherche sur la faisabilité de l'évaluation de la qualité de vie en routine au CHU de Besançon et apporte son expertise.

Partenariats : ARCAGY-GINECO, AFSOS-Unicancer, GERCOR, Pôle de Gérontologie et d'Innovation, EORTC QoL Group, GIMEMA (Italie).
